

Woodman Software Limited

Woodman Factory Manager

Woodman Factory Manager benefits your woodwork manufacturing business by providing smart tools that increase staff productivity and factory throughput, thus significantly reducing labour costs. The **Total Factory Management** system includes a graphical job scheduling and planning tool that allows scheduling of forward work loads, allowing identification of bottle necks and problems before they occur. *Powered by Empower.*

Labour Management

Job and Factory Staff tracking

Job Scheduling

Woodman Factory Manager benefits your business by

- significantly reducing labour costs
- increasing output by 20% and more
- providing real time production information
- enabling you to offer pay incentives based on output
- providing a forward view of factory work load to assist in production scheduling
- allowing analysis of rework and defect cause and effect
- eliminating any additional administration effort such as re-keying information or filling in time sheets

Factory staff logging onto jobs on the factory floor

Powerful Reporting

Easy to use reports provide up to the minute information on customer orders, jobs, staff and department productivity, throughput, forward work and much, much more. All reports are automatically available and can be viewed at any time either on the screen or by printing to your printer. Most reports can be viewed for any range of dates that you select, with a full history of all transactions always kept and available. A single click drops reports to Microsoft Excel, Word or to your email system allowing easy analysis of your business in a format you are used to.

Designed for Woodwork Manufacturers

Woodman Factory Manager is an Australasian product that has been specifically developed and designed for small to medium sized, woodwork manufacturers. We understand that manufacturing people are not necessarily computer experts, so Factory Manager has been designed to be easy to use. Data is captured directly at the factory floor - so you can spend more time on productive tasks rather than on record keeping. An on-line context sensitive help system is ready to help you at the touch of a button.
